**Alarm Management Client**

*AllGo*Vision Alarm Center

Alarm Center, the Alarm Management Client, provides options to view, search, report and analyse all the alarms generated by AllGoVision analytics running on different systems across a LAN. The database requirement is MySQL.

Manage your Video Analytics Alarms in a better way!

AllGoVision can work stand-alone! Takes video feed directly from cameras, sends alarms to Alarm Center where you can manage those alarms. Alarm Center provides more functionality than VMS client for analytic alarms.

IP Camera   AllGoVision GUI   Analytics Server   Alarm Center (Management Client)   Operator

However, AllGoVision can also send alarms to your VMS, if you have one. Alarm Center acts as a single viewer with different VMS integration. Alarm Center is available as plugin and can be integrated with VMS client. It also pulls recorded video from Milestone & Genetec on metadata search.

One application. So many benefits.

Face Recognition Alarms Preview & Playback

Alarm Center provides instant Alarm Popups for latest events. Alarm Image Preview and Alarm Video Playback are options to review any of the past alarms. It displays alarms with date and time stamp and all other properties so that searchability is maintained. Apart from basic features such as Search, Analysis and Report, Alarm Center supports a lot of options:

- Options for Grid View or Thumbnail View
- Live Reporting
- Emails on Alarms
- Sound Alarms
- Video Summary
- Parking Management Occupancy Display
- Support for Face Recognition Client

## Extensive options for Search, Analysis & Reporting

Search:

- Filters to search alarms based on alarm/object properties
- Provides search capability for Forensic search
- Forensic search based on object properties - size/color/type/time etc.
- Forensic search works with Milestone & Genetec recorded video.

Analysis:

- Heat Map: Density levels with different colors
- Flow Map: Paths of object or people movement

Reporting:

- Reports in different formats (PDF/JPG/XLS/TXT)
- Option to Schedule reports for Emailing & FTP Upload
- Zonal Report with multiple cameras added in each zone
- Comparison of Reports of various time periods

Face Detection/Recognition based Advanced Analytics

- Face Detection and Recognition Alarms - Preview & Search
- Face Capture to store faces for future evidence
- Face Forensic Search - image based search of alarms
- Face Recognition based Attendance Systems
- Face Count Statistics and Graphs, Alarms on threshold
- Face Presence - Duration Plot of faces visible in camera view
- Face Frequency - Distribution Plot for recognized people
- Viewership Measurement - Presence, Frequency, Demographics
